Dr. Supawadee Poungsombat has returned home to Thailand, she plans to:

1. Make the best utilization of the malaria data for public health and collaboration with the team at LSHTM for malaria surveillance, preparedness and response, and would be considerably helpful for decision makers for planning and allocating budget to malaria control and elimination activities of Thailand.

2. Submit her proposal which she developed while undertaking the fellowship program placement entitled "Spatial epidemiology of malaria incidence in endemic provinces along the International borders of Thailand" to the Director of the Bureau of Vector Disease, which she would then conduct a pilot study of utilizing the skills and knowledge gained from her fellowship.

Now that Dr. Supawadee Poungsombat has completed her APMEN Fellowship Program at the London School of Hygiene and Tropical Medicine, a city she has never been to before, especially studying in a famous institute like the London School of Hygiene and Tropical Medicine. The topic of Spatial Epidemiology in Public Health is something I am very interested in and is very useful to my work. I can share my experiences, knowledge and the lifestyle of living in London to other people, which may be useful for them if they choose to live in London happily.

The APMEN Fellowship program provided me an opportunity to study in the United Kingdom, a city I have never been to before, especially studying in a famous institute like the London School of Hygiene and Tropical Medicine. The topic of Spatial Epidemiology in Public Health is something I am very interested in and is very useful to my work. I can share my experiences, knowledge and the lifestyle of living in London to other people, which may be useful for them if they choose to live in London happily.
